## **ABSTRACT**

A writing instrument comprising a liquid reservoir for containing a liquid, a liquid
spray head for spraying liquid, the spray head serving to spray the liquid onto a medium
from a distance, and a processor unit serving to activate the spray head. The instrument
further comprises measurement means for measuring the distance between the spray head
and the medium, and movement detector means for detecting movement of the spray head
relative to the medium, the processor unit being adapted to cause the liquid spray head to be
activated when both the measurement means detect that the distance between the spray head
and the medium is less than a predetermined maximum value, and simultaneously the
movement detector means detect movement of the spray head relative to the medium.
